

CHAPTER 24. SUBSTANTIVE RULES APPLICABLE TO WATER AND SEWER SERVICE PROVIDERS.

Subchapter B. RATES AND TARIFFS.

§24.41. Cost of Service.

- (a) **Components of cost of service.** Rates are based upon a utility's cost of rendering service. The two components of cost of service are allowable expenses and return on invested capital.
- (b) **Allowable expenses.** Only those expenses that are reasonable and necessary to provide service to the ratepayers may be included in allowable expenses. In computing a utility's allowable expenses, only the utility's test year expenses as adjusted for known and measurable changes may be considered. A change in rates must be based on a test year as defined in §24.3(72) of this title (relating to Definitions of Terms).
- (1) Components of allowable expenses. Allowable expenses, to the extent they are reasonable and necessary, and subject to this section, may include, but are not limited to, the following general categories:
- (A) operations and maintenance expense incurred in furnishing normal utility service and in maintaining utility plant used by and useful to the utility in providing such service (payments to affiliated interests for costs of service, or any property, right, or thing, or for interest expense are not allowed as an expense for cost of service except as provided in TWC §13.185(e));
 - (B) depreciation expense based on original cost and computed on a straight line basis over the useful life of the asset as approved by the commission. Depreciation is allowed on all currently used depreciable utility property owned by the utility except for property provided by explicit customer agreements or funded by customer contributions in aid of construction. Depreciation on all currently used and useful developer or governmental entity contributed property is allowed in the cost of service. On all applications, the depreciation accrual for all assets must account for expected net salvage value in the calculation of the depreciation rate and actual net salvage value related to retired plant. The depreciation rate and expense must be calculated on a straight line basis over the expected or remaining life of the asset. Utilities must calculate depreciation on a straight line basis, but are not required to use the remaining life method if salvage value is zero. When submitting an application that includes salvage value in depreciation calculations, the utility must submit sufficient evidence with the application establishing that the estimated salvage value, including removal costs, is reasonable. Such evidence will be included for the asset group in depreciation studies for those utilities practicing group accounting while such evidence will relate to specific assets for those utilities practicing itemized accounting;
 - (C) assessments and taxes other than income taxes;
 - (D) federal income taxes on a normalized basis (federal income taxes must be computed according to the provisions of TWC §13.185(f), if applicable);
 - (E) funds expended in support of membership in professional or trade associations, provided such associations contribute toward the professionalism of their membership; and
 - (F) advertising, contributions and donations. The actual expenditures for ordinary advertising, contributions, and donations may be allowed as a cost of service provided that the total sum of all such items allowed in the cost of service shall not exceed three-tenths of 1.0% (0.3%) of the gross receipts of the water or wastewater utility for services rendered to the public. The following expenses are the only expenses that shall be included in the calculation of the three-tenths of 1.0% (0.3%) maximum:

CHAPTER 24. SUBSTANTIVE RULES APPLICABLE TO WATER AND SEWER SERVICE PROVIDERS.

Subchapter B. RATES AND TARIFFS.

- (i) funds expended advertising methods of conserving water;
 - (ii) funds expended advertising methods by which the consumer can effect a savings in total water or wastewater utility bills; and
 - (iii) funds expended advertising water quality protection.
 - (2) Expenses not allowed. The following expenses are not allowed as a component of cost of service:
 - (A) legislative advocacy expenses, whether made directly or indirectly, including, but not limited to, legislative advocacy expenses included in professional or trade association dues;
 - (B) funds expended in support of political candidates;
 - (C) funds expended in support of any political movement;
 - (D) funds expended in promotion of political or religious causes;
 - (E) funds expended in support of or membership in social, recreational, fraternal, or religious clubs or organizations;
 - (F) funds promoting increased consumption of water;
 - (G) additional funds expended to mail any parcel or letter containing any of the items mentioned in subparagraphs (A) - (F) of this paragraph;
 - (H) costs, including, but not limited to, interest expense of processing a refund or credit of sums collected in excess of the rate finally ordered by the commission;
 - (I) any expenditure found by the commission to be unreasonable, unnecessary, or not in the public interest, including, but not limited to, executive salaries, advertising expenses, rate case expenses, legal expenses, penalties and interest on overdue taxes, criminal penalties or fines, and civil penalties or fines; and
 - (J) the costs of purchasing groundwater from any source if:
 - (i) the source of the groundwater is located in a priority groundwater management area; and
 - (ii) a wholesale supply of surface water is available.
- (c) **Return on invested capital.** The return on invested capital is the rate of return times invested capital.
 - (1) Rate of return. The commission shall allow each utility a reasonable opportunity to earn a reasonable rate of return, which is expressed as a percentage of invested capital, and shall fix the rate of return in accordance with the following principles. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.
 - (A) The commission shall consider the efforts and achievements of the utility in the conservation of resources, the quality of the utility's services, the efficiency of the utility's operations, and the quality of the utility's management, along with other relevant conditions and practices.
 - (B) The commission may, in addition, consider inflation, deflation, the growth rate of the service area, and the need for the utility to attract new capital. In each case, the commission shall consider the utility's cost of capital, which is the composite of the cost of the various classes of capital used by the utility.
 - (i) Debt capital. The cost of debt capital is the actual cost of debt.
 - (ii) Equity capital. The cost of equity capital must be based upon a fair return on its value. For companies with ownership expressed in terms of shares of stock, equity capital commonly consists of the following classes of stock.
 - (I) Common stock capital. The cost of common stock capital must be based upon a fair return on its value.

CHAPTER 24. SUBSTANTIVE RULES APPLICABLE TO WATER AND SEWER SERVICE PROVIDERS.

Subchapter B. RATES AND TARIFFS.

- (II) Preferred stock capital. The cost of preferred stock capital is its annual dividend requirement, if any, plus an adjustment for premiums, discounts, and cost of issuance.
- (2) Invested capital, also referred to as rate base. The rate of return is applied to the rate base. Components to be included in determining the rate base are as follows:
 - (A) Original cost, less accumulated depreciation, of utility plant, property, and equipment used by and useful to the utility in providing service;
 - (B) Original cost, less net salvage and accumulated depreciation at the date of retirement, of depreciable utility plant, property and equipment retired by the utility; and
 - (i) For original cost under this subparagraph or subparagraph (A) of this paragraph, cost of plant and equipment allowed in the cost of service that has been estimated by trending studies or other means, which has no historical records for verification purposes, may receive an adjustment to rate base and/or an adjustment to the rate of return on equity.
 - (ii) Original cost in this subparagraph or subparagraph (A) of this paragraph is the actual money cost, or the actual money value of any consideration paid other than money, of the property at the time it was dedicated to public use, whether by the utility that is the present owner or by a predecessor. Assets may be booked in itemized or group accounting, but all accounting for assets and their retirements must be supported by an approved accounting system. On all assets retired from service after June 19, 2009, the original cost of an asset must be the book cost less net salvage value. If a utility calculates annual depreciation expense for an asset with allowance for salvage value, then it must account for the actual salvage amounts when the asset is actually retired. The utility must include the actual salvage calculation(s) in its net plant calculation(s) in the first full rate change application (excluding alternative rate method applications as described in §24.75 of this title (relating to Alternative Rate Methods)) it files after the date on which the asset was removed from service, even if it was not retired during the test year. Recovery of investment on assets retired from service before the estimated useful life or remaining life of the asset shall be combined with over accrual of depreciation expense for those assets retired after the estimated useful life or remaining life and the net amount shall be amortized over a reasonable period of time taking into account prudent regulatory principles. The following list shall govern the manner by which depreciation will be accounted for.
 - (I) Accelerated depreciation is not allowed.
 - (II) For those utilities that elect a group accounting approach, all mortality characteristics, both life and net salvage, must be supported by an engineering or economic based depreciation study for which the test year for the depreciation is no more than five years old in comparison to the rate case test year. The engineering or economic based depreciation study must include:
 - (-a-) investment by homogenous category;
 - (-b-) expected level of gross salvage by category;
 - (-c-) expected cost of removal by category;

CHAPTER 24. SUBSTANTIVE RULES APPLICABLE TO WATER AND SEWER SERVICE PROVIDERS.

Subchapter B. RATES AND TARIFFS.

- (-d-) the accumulated provision for depreciation as appropriately reflected on the company's books by category;
 - (-e-) the average service life by category;
 - (-f-) the remaining life by category;
 - (-g-) the Iowa Dispersion Pattern by category; and
 - (-h-) a detailed narrative identifying the specific factors, data, criteria and assumptions that were employed to arrive at the specific mortality proposal for each homogenous group of property.
- (iii) Reserve for depreciation under this subparagraph or subparagraph (A) of this paragraph is the accumulation of recognized allocations of original cost, representing recovery of initial investment, over the estimated useful life or remaining life of the asset. If individual accounting is used, a utility must continue booking depreciation expense until the asset is actually retired, and the reserve for depreciation shall include any additional depreciation expense accrued past the estimated useful or remaining life of the asset. If salvage value is zero, depreciation must be computed on a straight line basis over the expected useful life or remaining life of the item or facility. If salvage value is not zero, depreciation must also be computed on a straight line basis over the expected useful life or the remaining life. For an asset removed from service after June 19, 2009, accumulated depreciation will be calculated on book cost less net salvage of the asset. The retirement of a plant asset from service is accounted for by crediting the book cost to the utility plant account in which it is included. Accumulated depreciation must also be debited with the original cost and the cost of removal and credited with the salvage value and any other amounts recovered. Return may be allowed for assets removed from service after June 19, 2009, that result in an increased rate base through recognition in the reserve for depreciation if the utility proves that the decision to retire the asset was financially prudent, unavoidable, necessary because of technological obsolescence, or otherwise reasonable. The utility must also provide evidence establishing the original cost of the asset, the cost of removal, salvage value, any other amounts recovered, the useful life of the asset (or remaining life as may be appropriate), the date the asset was taken out of service, and the accumulated depreciation up to the date it was taken out of service. Additionally, the utility must show that it used due diligence in recovering maximum salvage value of a retired asset. The requirements relating to the accounting for the reasonableness of retirement decisions for individual assets and the net salvage value calculations for individual assets only apply to those utilities using itemized accounting. For those utilities practicing group accounting, the depreciation study will provide similar information by category. TWC §13.185(e) relating to dealings with affiliated interests, will apply to business dealings with any entity involved in the retirement, removal, or recovery of assets. Assets retired subsequent to June 19, 2009, will be included in a utility's application for a rate change if the application is the first application for a rate change filed by the utility after the date the asset was retired and specifically identified if the utility uses itemized accounting. Retired assets

CHAPTER 24. SUBSTANTIVE RULES APPLICABLE TO WATER AND SEWER SERVICE PROVIDERS.

Subchapter B. RATES AND TARIFFS.

- will be reported for the asset group in depreciation studies for those utilities practicing group accounting, while retired assets will be specifically identified for those utilities practicing itemized accounting;
- (iv) the original cost of plant, property, and equipment acquired from an affiliated interest may not be included in invested capital except as provided in TWC §13.185(e);
 - (v) utility property funded by explicit customer agreements or customer contributions in aid of construction such as surcharges may not be included in original cost or invested capital; and
- (C) Working capital allowance to be composed of, but not limited to the following:
- (i) reasonable inventories of materials and supplies, held specifically for purposes of permitting efficient operation of the utility in providing normal utility service. This amount excludes inventories found by the commission to be unreasonable, excessive, or not in the public interest;
 - (ii) reasonable prepayments for operating expenses. Prepayments to affiliated interests are subject to the standards set forth in TWC §13.185(e); and
 - (iii) a reasonable allowance for cash working capital. The following shall apply in determining the amount to be included in invested capital for cash working capital:
 - (I) Cash working capital for water and wastewater utilities shall in no event be greater than one-eighth of total annual operations and maintenance expense, excluding amounts charged to operations and maintenance expense for materials, supplies, fuel, and prepayments.
 - (II) For Class C utilities, one-eighth of operations and maintenance expense excluding amounts charged to operations and maintenance expense for materials, supplies, expenses recovered through a pass through provision or through charges other than base rate and gallonage charges, prepayments will be considered a reasonable allowance for cash working capital.
 - (III) For Class B utilities, one-twelfth of operations and maintenance expense excluding amounts charged to operations and maintenance expense for materials, supplies, expenses recovered through a pass through provision or charges other than base rate and gallonage charges, and prepayments will be considered a reasonable allowance for cash working capital.
 - (IV) For Class A utilities, a reasonable allowance for cash working capital, including a request of zero, will be determined by the use of a lead-lag study. A lead-lag study will be performed in accordance with the following criteria:
 - (-a-) The lead-lag study will use the cash method; all non-cash items, including but not limited to depreciation, amortization, deferred taxes, prepaid items, and return (including interest on long-term debt and dividends on preferred stock), will not be considered.
 - (-b-) Any reasonable sampling method that is shown to be unbiased may be used in performing the lead-lag study.
 - (-c-) The check clear date, or the invoice due date, whichever is later, will be used in calculating the lead-lag days used

CHAPTER 24. SUBSTANTIVE RULES APPLICABLE TO WATER AND SEWER SERVICE PROVIDERS.

Subchapter B. RATES AND TARIFFS.

- in the study. In those cases where multiple due dates and payment terms are offered by vendors, the invoice due date is the date corresponding to the terms accepted by the water or wastewater utility.
- (-d-) All funds received by the water or wastewater utility except electronic transfers shall be considered available for use no later than the business day following the receipt of the funds in any repository of the water or wastewater utility (e.g., lockbox, post office box, branch office). All funds received by electronic transfer will be considered available the day of receipt.
 - (-e-) For water and wastewater utilities the balance of cash and working funds included in the working cash allowance calculation shall consist of the average daily bank balance of all noninterest bearing demand deposits and working cash funds.
 - (-f-) The lead on federal income tax expense shall be calculated by measurement of the interval between the mid-point of the annual service period and the actual payment date of the water or wastewater utility.
 - (-g-) If the cash working capital calculation results in a negative amount, the negative amount shall be included in rate base.
- (V) If cash working capital is required to be determined by the use of a lead-lag study under subclause (VI) of this clause and either the water or wastewater utility does not file a lead-lag study or the utility's lead-lag study is determined to be unreliable, in the absence of persuasive evidence that suggests a different amount of cash working capital, zero will be presumed to be the reasonable level of cash working capital.
 - (VI) A lead lag study completed within five years of the application for rate/tariff change shall be deemed adequate for determining cash working capital unless sufficient persuasive evidence suggests that the study is no longer valid.
 - (VII) Operations and maintenance expense does not include depreciation, other taxes, or federal income taxes, for purposes of subclauses (I), (II), (III) and (V) of this clause.
- (3) **Deduction of certain items from rate base, which include, but are not limited to, the following.** Unless otherwise determined by the commission, for good cause shown, the following items will be deducted from the overall rate base in the consideration of applications filed pursuant to TWC §13.187 or §13.1871:
- (A) accumulated reserve for deferred federal income taxes;
 - (B) unamortized investment tax credit to the extent allowed by the Internal Revenue Code;
 - (C) contingency and/or property insurance reserves;
 - (D) contributions in aid of construction; and
 - (E) other sources of cost-free capital, as determined by the commission.
- (4) **Construction work in progress (CWIP).** The inclusion of construction work in progress is an exceptional form of relief. Under ordinary circumstances, the rate base consists only of

CHAPTER 24. SUBSTANTIVE RULES APPLICABLE TO WATER AND SEWER SERVICE PROVIDERS.

Subchapter B. RATES AND TARIFFS.

those items that are used and useful in providing service to the public. Under exceptional circumstances, the commission may include construction work in progress in rate base to the extent that the utility has proven that:

- (A) the inclusion is necessary to the financial integrity of the utility; and
- (B) major projects under construction have been efficiently and prudently planned and managed. However, construction work in progress may not be allowed for any portion of a major project that the utility has failed to prove was efficiently and prudently planned and managed.

(5) Requirements for post-test year adjustments.

- (A) A post-test year adjustment to test year data for known and measurable rate base additions may be considered only if:
 - (i) the addition represents a plant which would appropriately be recorded for investor-owned water or wastewater utilities in NARUC account 101 or 102;
 - (ii) the addition comprises at least 10% of the water or wastewater utility's requested rate base, exclusive of post-test year adjustments and CWIP;
 - (iii) the addition is in service before the rate year begins; and
 - (iv) the attendant impacts on all aspects of a utility's operations (including but not limited to, revenue, expenses and invested capital) can with reasonable certainty be identified, quantified and matched. Attendant impacts are those that reasonably result as a consequence of the post-test year adjustment being proposed.
- (B) Each post-test year plant adjustment described by subparagraph (A) of this paragraph will be included in rate base at the reasonable test year-end CWIP balance, if the addition is constructed by the utility or the reasonable price, if the addition represents a purchase, is subject to original cost requirements, as specified in TWC §13.185.
- (C) Post-test year adjustments to historical test year data for known and measurable rate base decreases will be allowed only if:
 - (i) the decrease represents:
 - (I) plant which was appropriately recorded in the accounts set forth in subparagraph (A) of this paragraph;
 - (II) plant held for future use;
 - (III) CWIP (mirror CWIP is not considered CWIP); or
 - (IV) an attendant impact of another post-test year adjustment.
 - (ii) the decrease represents a plant that has been removed from service, sold, or removed from the water or wastewater utility's books prior to the rate year; and

CHAPTER 24. SUBSTANTIVE RULES APPLICABLE TO WATER AND SEWER SERVICE PROVIDERS.

Subchapter B. RATES AND TARIFFS.

- (iii) the attendant impacts on all aspects of a utility's operations (including but not limited to, revenue, expenses and invested capital) can with reasonable certainty be identified, quantified and matched. Attendant impacts are those that reasonably result as a consequence of the post-test year adjustment being proposed.
- (d) **Recovery of positive acquisition adjustments.**
 - (1) For utility plant, property, and equipment acquired by a utility from another retail public utility as a sale, merger, etc. of utility service area for which an application for approval of sale has been filed with the commission on or after September 1, 1997, and that sale application closed thereafter, a positive acquisition adjustment will be allowed to the extent that the acquiring utility proves that:
 - (A) the property is used and useful in providing water or sewer service at the time of the acquisition or as a result of the acquisition;
 - (B) reasonable, prudent, and timely investments will be made if required to bring the system into compliance with all applicable rules and regulations;
 - (C) as a result of the sale, merger, etc.:
 - (i) the customers of the system being acquired will receive higher quality or more reliable water or sewer service or that the acquisition was necessary so that customers of the acquiring utility's other systems could receive higher quality or more reliable water or sewer service;
 - (ii) regionalization of retail public utilities (meaning a pooling of financial, managerial, or technical resources that achieve economies of scale or efficiencies of service) was achieved; or
 - (iii) the acquiring system will become financially stable and technically sound as a result of the acquisition, or the system being acquired that is not financially stable and technically sound will become a part of a financially stable and technically sound utility;
 - (D) any and all transactions between the buyer and the seller entered into as a part or condition of the sale are fully disclosed to the commission and were conducted at arm's length;
 - (E) the actual purchase price is reasonable in consideration of the condition of the plant, property, and equipment being acquired; the impact on customer rates if the acquisition adjustment is granted; the benefits to the customers; and the amount of contributions in aid of construction in the system being acquired;
 - (F) in a single or multi-stage sale, the owner of the acquired retail public utility and the final acquiring utility are not affiliated. A multi-stage sale is where a stock transaction is followed by a transfer of assets in what is essentially a single sales transaction. A positive acquisition adjustment is allowed only in those cases where the multi-stage transaction was fully disclosed to the commission in the application for approval of the initial stock sale. Any multi-stage sale occurring between September 1, 1997 and February 4, 1999 is exempt from the requirement for commission notification at the time of the approval of the initial sale, but must provide such notification by April 5, 1999; and
 - (G) the rates charged by the acquiring utility to its pre-acquisition customers will not increase unreasonably because of the acquisition.
 - (2) The amount of the acquisition adjustment approved by the regulatory authority must be amortized using a straight line method over a period equal to the weighted average remaining useful life of the acquired plant, property, and equipment, at an interest rate equal to the rate

CHAPTER 24. SUBSTANTIVE RULES APPLICABLE TO WATER AND SEWER SERVICE PROVIDERS.

Subchapter B. RATES AND TARIFFS.

- of return determined under subsection (c) of this section. The acquisition adjustment may be treated as a surcharge and may be recovered using non-system-wide rates.
- (3) The authorization for and the amount of an acquisition adjustment can only be determined as a part of a rate change application.
 - (4) The acquisition adjustment can only be included in rates as a part of a rate change application.
- (e) **Negative acquisition adjustment.** When a retail public utility acquires plant, property, or equipment pursuant to §24.239 of this chapter (relating to Report of Sale, Merger, Etc.; Investigation; Disallowance of Transaction) and the original cost of the acquired property less depreciation exceeds the actual purchase price, the utility shall record the negative acquisition adjustment separately from the original cost of the acquired property. For purposes of ratemaking, the following shall apply:
- (1) If a utility acquires plant, property, or equipment from a nonfunctioning retail public utility through a sale, transfer, or merger, receivership, or the utility is acting as a temporary manager, a negative acquisition adjustment shall be recorded and amortized on the utility's books with no effect on the utility's rates.
 - (2) If a utility acquires plant, property, or equipment from a retail public utility through a sale, transfer, or merger and paragraph (1) of this subsection does not apply, the commission may, at its sole discretion, recognize the negative acquisition adjustment in the ratemaking proceeding, by amortizing the negative acquisition adjustment through a bill credit for a defined period of time or by other means determined appropriate by the commission. Except for good cause found by the commission, the negative acquisition adjustment shall not be used to reduce the balance of invested capital.
 - (3) Notwithstanding paragraph (2) of this subsection, the acquiring utility may show cause as to why the commission should not account for the negative acquisition adjustment in the ratemaking proceeding.
- (f) **Intangible assets shall not be allowed in rate base unless:**
- (1) The amount requested has been verified by documentation as to amount and exact nature;
 - (2) Testimony has been submitted as to reasonableness and necessity and benefit of the expense to the customers; and
 - (3) The testimony must further show how the amount is properly considered as part of an actual asset purchased or installed, or a source of supply, such as water rights.
 - (4) If the requirements in paragraphs (1) and (2) of this subsection are met, but the requirement in paragraph (3) of this subsection is not met, the amount shall be amortized over a reasonable period and the amortization shall be allowed in the cost of service. The amount shall be considered a non-recurring expense. Unamortized amounts shall not be included in rate base for purposes of calculating return on equity.
